

PFF Grain Free

Pellets or mash

Actual content may vary in micro analysis

FACT SHEET (as fed)

Nutrition

Protein	16%
ME	11.5
Moisture	10.1%
Fat	3.5%
Fibre	12.6%
Ash	4.9%
Starch	7%

Typical Ingredients

Protein	Canola meal, almond hulls, soybean meal, other seasonal raw materials
Vitamins	A, B, D & E
May contain	Canola Oil or molasses

Additional minerals kg per tonne

Salt	5
Calcium	1
Phosphorus	.6
DCP 18	5
Limestone	14

Trace elements

- Cobalt
- Copper
- Magnesium
- Manganese
- Iron
- Iodine
- Selenium
- Sulphur
- Zinc

Do not feed to equine, canine or feline animals

AVAILABLE SIZES

Bulka bags (approx 800kg)
Bulk loads

Consumption may vary depending on availability of local feed sources.

PRODUCT FEATURES

- Highly palatable mix for livestock.
- Product provides a broad spectrum of minerals and vitamins for animal well-being.
- Balanced pH, energy and rumen degradable protein blend supporting healthy fermentation and microbial growth.
- Moderate sized feed particles for improved speed of digestion.
- Highly accessible flushed microbes easily digested and absorbed quickly in the abomasum and small intestine.
- Provides for adequate undegradable dietary protein directly available to the animal.

QUALITY ASSURED

Strict production quality control standards are adhered to from the receiving of raw materials through to the dispatch to our clients and customers.

All formulations are issued in accordance with Creswell Nutrition research guidelines.

FEEDING GUIDE

Daily feeding rate varies from animal to animal. Typically commence feeding your animals between 1 - 1.5% by body weight per day. Introduce the feed to your livestock at a 1-2 kg per day and supervise. After 3 days gradually

introduce more feed as the rumen adapts. Keep a balance diet to ensure full productivity.

These feeding rates are suggestions only and all variables such as age, pasture quality, & etc. should be taken into account. Product is suitable and flows well through auto and self feeders or simply made available in open troughs.

It is recommendation that livestock always have access to adequate hay, pasture or silage whenever being fed high protein supplements. Ensure fresh clean water is available at all times.

NOTE

Nutritional analysis may vary due to seasonal factors and available resources. The above specifications are based on a typical analysis taken at the time of publishing.

It is recommended that the feed be used within 6 months from date of purchase.

Please keep stored in a cool dry space.
